

Speaker Page — How-To Guide

Editing krystalore.com/speaker from the admin · Krystalore Crews

The short version: Go to krystalore.com/admin/speaker-page, make your changes, press **Save**. That's it — the live page updates immediately. No developer, no deploy, no waiting.

Getting there

1. Sign in at krystalore.com with your admin account.
2. Go to krystalore.com/admin.
3. In the left sidebar, click **Speaker Page** (microphone icon), under “Content”.

You can jump straight there any time with krystalore.com/admin/speaker-page.

What you can edit

SECTION ON THE PAGE	WHAT IT IS
Featured Appearances	Cards for shows, podcasts and press. Each has a title, description, image, brand logo, and a button that opens a video, PDF, image, or link.
Video Sections	The “Krystalore Speaks” area — Resilience & Reinvention, Wellness & Empowerment, Story & Interviews, plus any new section you create.
On Stage	The photo grid near the bottom of the page.

Three buttons you'll use constantly

- **Save** — publishes everything. Nothing goes live until you press it.
- **View Page** — opens the real Speaker page in a new tab so you can check your work.
- **Reset to defaults** (bottom of the page) — undoes *all* your saved changes and puts the page back exactly how it was originally built. Your safety net.

Adding a Featured Appearance

1. **1** Click **Add appearance**. A blank card appears at the bottom.
2. **2** Type the **Title** — the episode or article name.
3. **3** Write a short **Description** (2–3 lines reads best).
4. **4** For **Marketing image**, click **Choose** to upload a picture or pick one you've used before.
5. **5** Optional: add the **Brand / show name** and a **Brand logo** — the logo shows as a small badge on the image.
6. **6** Under **What opens**, choose the type (see the table below), then paste the link or ID in the box beside it.
7. **7** Press **Save**.

“What opens” — choosing the right type

TYPE	USE IT FOR	WHAT TO PASTE
<code>youtube</code>	A YouTube video	The whole YouTube link — the ID is pulled out automatically
<code>vimeo</code>	A Vimeo video	The Vimeo video number
<code>video</code>	A video file you uploaded	The file link, ending in <code>.mp4</code>
<code>pdf</code>	A one-sheet, press kit, article	The PDF link, e.g. <code>/pdf/one-sheet.pdf</code>
<code>image</code>	A poster or photo to view large	The image link
<code>embed</code>	Anything else that displays in a window	The page address
<code>link</code>	Sending people to another website	The full address — opens in a new tab

Button label: leave it blank and the site picks a sensible one for you — “Watch Now” for video, “Read the PDF” for a PDF, and so on. Only fill it in if you want different wording.

Adding a video to an existing section

1. **1** Scroll to **Video Sections**.
2. **2** Find the section you want (e.g. *Wellness & Empowerment*).
3. **3** Click **Add video to this section** at the bottom of it.
4. **4** Type the **Video title**.
5. **5** Paste the **YouTube link** — you can paste the whole address, it will keep just the ID.
6. **6** Press **Save**.

The thumbnail is pulled from YouTube automatically — you don't need to upload one.

Creating a brand-new video section

Click **Add video section**, give it a heading (and an optional line of description underneath), then add videos to it the same way. It appears on the page in the order shown here.

Adding an On Stage photo

1. **1** Scroll to **On Stage** and click **Add photo**.
2. **2** Click **Choose** to upload or select the picture.
3. **3** In the second box, describe the photo in a few words (“Krystalore keynoting at WNY Heroes”). This is read aloud by screen readers and helps Google.
4. **4** Press **Save**.

Landscape photos look best. They're displayed in a 4:3 frame, cropped from the top.

Reordering and removing

Every item has three small buttons in its top-right corner:

- ▲ / ▼ — move the item up or down. The order here is the order on the page.
- **Trash** — remove the item. It disappears immediately from the editor, but is not published until you press **Save**.

Deleted something by accident? Don't press Save — just leave the page and come back. Nothing was published. If you already saved, press **Reset to defaults** to restore the original page, or re-add the item.

Checking your work

1. Press **Save** and wait for the green “Saved at ...” message.
2. Click **View Page** to open the live Speaker page in a new tab.
3. If you had the page open already, refresh it.

Always click your new card or video once on the live page to confirm it opens what you expect.

If something looks wrong

WHAT YOU SEE	WHAT TO DO
The card image is blank	The image link is wrong or the file was moved. Click Choose and pick it again.
A video won't play	Check the ID is only the code (like <code>LBXH4_Lk48s</code>). Re-paste the full YouTube link and let it extract the ID.
The PDF shows a blank box on an iPhone	Normal — iPhones don't display PDFs inline. Visitors can tap Open in new tab or Download .
You changed something and it's not live	You didn't press Save , or you're looking at a cached tab. Save, then hard-refresh.
The page looks broken	Press Reset to defaults . The page returns to how it originally shipped.

You can't break the live site from here. If the editor is ever empty or the database is unavailable, the Speaker page automatically falls back to its original built-in content. Visitors never see a blank page.
